

Together for health: a strategic approach for the EU 2008-2013

2008/2115(INI) - 09/10/2008 - Text adopted by Parliament, single reading

The European Parliament adopted by 554 votes to 23 with 21 abstentions a resolution in response to the Commission's White Paper entitled 'Together for Health: A Strategic Approach for the EU 2008-2013'.

The own-initiative report had been tabled for consideration in plenary by Alojz **PETERLE** (EPP-ED, SI) on behalf of the Committee on the Environment, Public Health and Food Safety.

Parliament recalls that health is one of the most precious things and its goal is to guarantee a **high level of health for all**. It also recalls the increasing rates of cancer, diabetes, cardiovascular disease, rheumatic diseases, mental illness, overweight and obesity problems, along with malnutrition and inadequate nutrition, HIV/AIDS, the poor quality of the environment and the re-emergence of certain diseases associated with growing social inequalities. MEPs recall the new threats to health with cross-border dimensions and call for more prevention to avoid the upsurge of certain illnesses.

Parliament welcomes the Commission White Paper and supports the values, principles, strategic goals and specific actions set out therein. However, MEPs deplore the fact that the White Paper does not set specific quantifiable and measurable objectives whose attainment could produce tangible results to improve the level of health in the Union. Calls on the Commission to review existing work in the field of health to determine which work streams are delivering value for the Community and Member States. As part of this work, Parliament calls on the Commission to determine which working methods and practices add value to the work of Member States in the field of health and which should be better coordinated.

Prevention: according to the WHO, chronic diseases and particularly strokes and heart disease are steadily overtaking infectious diseases. Parliament recommends the widespread adoption of the practice of performing health impact assessments. The report stresses that action plans should address, in particular, the causes of certain diseases and the need to reduce and prevent epidemics and pandemics. Parliament believes that disease prevention efforts and vaccination campaigns, where effective products exist, should be stepped up significantly. The Commission is therefore urged to draw up an **ambitious plan for preventive actions** for the entire 5-year period.

Reduce inequalities: Parliament proposes that the Commission set as a priority goal a reduction in avoidable health inequalities and inequities between and within Member States, as well as between different social groups and sections of the population, including men and those with mental health problems. It stresses that actions aimed at reducing inequities in health should include targeted promotion, public education and prevention programmes. The Commission and the Member States are called upon to consider the contribution which **integrated social and health policies** could make to a modern approach to the promotion and protection of health and they are asked to pay attention to the role and responsibility of the pharmaceutical industry.

Transparency and reliable information: Parliament stresses that access to reliable, independent and comparable information about healthy behaviours, diseases and treatment options is a prerequisite for an effective disease prevention strategy. It stresses furthermore that, in order to promote investment in health, it is vital to measure the effectiveness of investments to date and to publish the findings.

Protection of health care workers: Parliament believes that the EU should take further steps to protect health care workers from accidents and injury in the workplace where there is scientific or medical

evidence of need. The Commission is urged to include substances toxic for reproduction in its forthcoming proposal for amendment of **Directive 2004/37/EC**. Parliament endorses the action called for in its resolution of 15 January 2008 (see [INI/2007/2146](#)) and urges the Commission to respect Parliament's opinion and take the measures called for and come forward with the necessary initiatives which should include:

- Setting targets for the reduction of occupational illnesses;
- A proposal for a directive on musculoskeletal disorders;
- A proposal for a revision of Directive 2004/37/EC;
- Measures to address the growing problem of third party violence;

Parliament regrets that, despite its repeated and specific requests, the Commission has yet to propose amending Directive 2000/54/EC on the protection of workers from risks related to exposure to biological agents at work with a view to addressing the serious risks to health care workers arising from working with needles and medical sharps. Parliament calls on the Commission to expedite the completion of the impact assessment in this field and calls for an appropriate amendment to be adopted well before the end of the current parliamentary term in line with its resolution of 6 July 2006 ([INI/2006/2015](#)).

Improved research on health: the report stresses the importance of carrying out well-organised, comprehensive and effective screening programmes to facilitate the early detection and immediate treatment of disease, thereby reducing the associated mortality and morbidity. The Commission and the Member States are invited to explore further, in the framework of the strategy, the synergies between scientific and technological research, particularly as regards new kinds of research in medical areas that are currently under-funded.

Healthy living: Parliament stresses that the concept of 'healthy lifestyle' (i.e. a healthy diet, the absence of drug abuse and sufficient physical activity) needs to be complemented by a psychosocial dimension (i.e. a balanced approach to work and family life). It stresses the need to highlight key health-related issues, such as nutrition, obesity, malnutrition, physical activity, consumption of alcohol, drugs and tobacco and environmental risks. In this context, the Commission is urged to take a more holistic approach to nutrition and make malnutrition, alongside obesity, a key priority in the field of health, incorporating it wherever possible into EU-funded research, education and health promotion initiatives and EU-level partnerships. Parliament believes that action to promote healthy lifestyles in families, schools, hospitals, care homes, workplaces and places of leisure is essential to successful disease prevention and good mental health. It recognises that the family is of vital importance in establishing a 'healthy lifestyle' model which is often replicated in later life.

Antibiotics: the report demands effective measures to combat antibiotic resistance including measures to make **antibiotics prescription only**, guidelines to decrease the prescription of antibiotics to limit it to cases in which the use of an antibiotic is indeed necessary, efforts to improve marker tests in order to encourage a more cautious use of antibiotics, and, where appropriate, hygiene codes. Parliament calls for special attention to be paid to the methicillin-resistant *Staphylococcus aureus* (MRSA) bacteria. Moreover, Parliament welcomes the approach proposed by the Commission with a view to combating effectively the counterfeiting of medicines and encourages the Commission to promote the drafting of an international convention on this subject.

Improved cooperation: Parliament welcomes the Commission's proposal to set up an EU-level structured cooperation mechanism and to establish closer cooperation with stakeholders. They call on the Member States, along with regional and local authorities, to use the cooperation mechanism to improve the exchange of best practice. They agree that actions under the Strategy must be supported by existing financial instruments until the end of the current Financial Framework (2013), without additional budgetary consequences.

Human body: Parliament stresses that the prohibition on making the human body and its parts as such a source of financial gain (as mentioned in the EU Charter of Fundamental Rights) should be considered a guiding principle in the area of health, especially in the field of cell, tissue and organ donation and transplantation.

Other targeted measures: Parliament calls on the Commission and the Member States, in the framework of the EU's health strategy, to work towards the development of guidelines for a common definition of disability (which may include people with chronic illnesses or cancer); to strengthen measures ensuring that persons with disabilities are given equal access to health care; to provide more effective exchanges of best practices within the EU in all areas of health-care provision, in particular in relation to screening programmes and the diagnosis and treatment of serious illnesses such as cancer; to **increase public awareness** of reproductive and sexual health in order to prevent unwanted pregnancies and the spread of sexually transmitted diseases and reduce the social and health problems caused by infertility; to improve health care and information for pregnant and breastfeeding women concerning the risks associated with alcohol, drug and tobacco consumption during pregnancy and breastfeeding...
