

Review of the 6th environment action programme and the setting of priorities for the 7th environment action programme

2011/2194(INI) - 08/03/2012 - Committee report tabled for plenary, single reading

The Committee on the Environment, Public Health and Food Safety adopted the own-initiative report by Jo LEINEN (S&D, DE) on the review of the 6th Environment Action Programme and the setting of priorities for the 7th Environment Action Programme (EAP) – A better environment for a better life.

The report underlines the **urgency of adopting as soon as possible a 7th EAP**, in order to address the environmental challenges lying ahead and calls therefore on the Commission to present a proposal for a 7th EAP without delay.

The new 7th EAP should:

- **describe in an unambivalent manner the environmental challenges** the EU is faced with, including accelerating climate change, deterioration of our ecosystem and increasing overuse of natural resources;
- provide a **positive narrative** on the benefits of stringent environmental policy to strengthen public support and political will to act;
- set **concrete targets for 2020** as well as setting out a clear ambitious vision for the environment in 2050 aimed at providing a high quality of life and well-being for all within safe environmental limits;
- provide the **right framework** to ensure adequate funding, including for innovation, research and development and that financing environmental objectives, in synergy with LIFE, and fully integrating protection of the environment should be an important part of the next Multiannual Financial Framework, of the reform of the Common Agricultural Policy (CAP), of the Common Fisheries Policy (CFP), of the Cohesion Policy and of Horizon 2020. The EU should allow new sources of financing to be created for the EAP, for instance through the mobilisation of market instruments and payments for ecosystem services;
- be an **overarching framework** that makes it possible to deal with both persistent and emerging environmental and sustainability challenges, with due regard for existing and planned measures.

The committee invites the Commission to base its future proposal for the 7th EAP on the following 3 'i's priorities: (i) Implementation and strengthening ; (ii) Integration ; (iii) International dimension.

Implementation and strengthening: noting with concern that implementation of the environmental acquis is still insufficient, Members consider that full implementation and enforcement at all levels, and further strengthening, of key environmental and related policy priorities – climate change, biodiversity, resources, environment and health, as well as social and employment policies, energy, sustainable transport, sustainable agriculture and rural development – are crucial. Members emphasise, therefore:

- the need for **clear, consistent environmental legislation**, based on public policy evaluations and feedback;
- the fact that **full compliance** with EU environmental law is a genuine Treaty obligation and a criterion for the use of EU funds in Member States;
- the fundamental **importance of informing citizens** about our environmental policies in order to involve them in the success of such policies.

Integration: taking the view that environmental considerations are gaining increasing importance in other sectoral policies, Members consider that environment policy should be further integrated into other policy areas. They invite the Commission to develop indicators in order to be able to measure improvement of integration.

The committee takes the view that the objectives of [Roadmap 2050](#) can only be achieved if complementary strategies are implemented, including assessment of agriculture, reforestation and the introduction of policy incentives for innovation and rapid implementation of solar, geothermal and marine energy.

The Commission is called upon to:

- include in its 7th EAP proposal an **aggregated list of all the existing environment-related targets** for the different policy areas, notably climate change, biodiversity, transport, energy, agriculture, fisheries and cohesion policy, and examine them in conjunction with each other, so as to allow for an appropriate comparison and to ensure that objectives are coherent;
- when **reviewing the Environmental Impact Assessment Directive and Directive 2001/42/EC**, to ensure that they contribute to a sustainable use of land as a critical resource in the EU and also to extend the scope of environmental impact assessments to cover not only large projects, while tightening and expanding the criteria of such assessments but also to include the notion of cascading use of resources and full life-cycle analysis;
- propose a procedure ensuring the **impartiality and independence of environmental impact assessments**, first of all by eliminating the direct relationship between project developers and the assessors.

The report recommends that an equitable balance be found between the need to combat climate change and to halt or mitigate biodiversity loss and the Seventh Environment Action Programme. It also stresses the importance of cohesion policy post-2013.

Members consider that the 7th EAP should:

- include a strict and detailed plan both at European and national level for the **phasing-out of all environmentally harmful subsidies by 2020**, for example those affecting biodiversity, in order to respect the Nagoya commitments;
- address fiscal reform measures to enhance Member States' activities on shifting taxes from labour to natural resources and to pollutants;
- provide for the inclusion of environmental considerations beyond the current climate change and energy headline indicators in the **European Semester**;
- provide for the full implementation of the Aarhus Convention, in particular regarding access to justice;
- aim at supporting the **development of alternative models** to measure growth and welfare 'beyond GDP'.

The Commission and the Member States are called upon to: (i) promote the 'green economy' globally, integrating environmental, social and economic aspects such as poverty reduction; (ii) develop within the next Research Framework Programme a research and innovation programme targeting **new materials and resources** which could in the future replace existing raw materials that are in short supply.

The report takes the view that the **LIFE+ programme** should be managed by the Commission, with the emphasis being placed on international projects of innovation and excellence, promoting SMEs and R&D

institutions and prioritising the maintenance of biodiversity with a systematic and integral approach and agricultural technologies compatible with the preservation of the soil and the food chain of animals' ecosystems.

It underlines the importance of demonstrating to EU citizens, especially in the current economic climate, that environmental protection is **not contradictory to sustainable economic and social development**.

International dimension: Members consider that the 7th EAP should have as a goal to integrate environmental considerations into all EU external relations, in particular into development aid and trade agreements, in order to promote environmental protection in third countries. They urge the EU to promote joint programming of environmental research activities with its neighbours.

The Commission is invited to include in its proposal a goal for the EU to fully support the work on environmental accounting done by the UN, the World Bank and European Environment Agency, in order to equip the world with a harmonised environmental accounting system.

Lastly, Members consider that the 7th EAP should provide for timely implementation of EU international commitments, in particular in the framework of the UNFCCC and the Convention on Biodiversity.
