Transmissible animal diseases

2013/0136(COD) - 08/03/2016 - Text adopted by Parliament, 2nd reading

The European Parliament adopted a resolution on the Council position at first reading with a view to the adoption of a regulation of the European Parliament and of the Council on transmissible animal diseases and amending and repealing certain acts in the area of animal health ("Animal Health Law").

Parliament approved the Council position at first reading. It also approved the joint statement by Parliament, the Council and the Commission on antimicrobial resistance and the use of veterinary medicinal products, annexed to this resolution.

Based on the Communication from the Commission entitled "Action plan against the rising threats from Antimicrobial Resistance", this joint statement called upon the Member States to commit themselves to collect relevant, comparable and sufficiently detailed data on the actual use of antimicrobial medicinal products in animals and to send such data to the Commission in order to ensure a more prudent use of antimicrobial medicinal products in animals, hence contributing to the reduction of the risk of antimicrobial resistance.

Members also took note of **two Commission statements** in which the Commission:

- undertakes to **publish a regular report as regards the use of antimicrobial medicinal products** in animals in the EU on the basis of data made available by the Member States;
- affirms that it is fully committed to paying **full regard to animal welfare** (although the proposed Regulation does not contain specific provisions on animal welfare), including ensuring full implementation and appropriate development of this legislation. The Union has a well-developed acquis regarding animal welfare covering different species (broilers, laying hens, pigs, calves) or activities (farming, transport, slaughter, research, etc.). This animal welfare legislation will necessarily continue to apply.
