Conservation and management of fishery resources: eligibility of expenditure by the Member States (amend. Regululation (EEC) No 2847/93)

1995/0142(CNS) - 09/10/1995

While stressing the importance of this measure, which was said to cost relatively little when set against the economic and ecological benefits provided by an efficient, fair and realistic fishery policy, the rapporteur declared that any control procedure had to be equitable and operational if it was to be accepted by all those operating in this sector. The proposed amendments relate essentially to the level of Community financial contribution, the dates for requesting Community assistance and the amounts being advanced.
