Groups of additives used in animal nutrition

1993/1194(CNS) - 07/07/1993 - Legislative proposal

The proposal for a directive amending Directive No 70/524 provides that, for reasons of safety both in human and in animal and environmental health, the authorisation of additives belonging to certain groups will in future be linked to those responsible for entry into free circulation. The purpose of this proposal is therefore to list the groups: antibiotics, coccidiostatics and other medicinal substances, growth factors.
