Agricultural statistics: application of remote sensing during the period 1994-1998

1994/0139(CNS) - 06/06/1994 - Legislative proposal

This proposal for a decision aimed to continue and develop the pilot project concerning the application of remote sensing to agricultural statistics, whose first phase (1989-1993) had come to an end. Actions would be grouped into: - operational activities: regional inventories and European rapid estimates; - activities for development: integrated system, monitoring and prediction of harvests outside the Community, application of new methods or sensors. The total budget for this new phase (1994-98) would amount to ECU 15.7 million.
