Measures for the control of classical swine fever

1995/0298(CNS) - 06/12/1995 - Legislative proposal

OBJECTIVE: the purpose of the Commission proposal is to undertake codification of Council Directive 480/217/EEC of 22 January 1980 introducing Community measures for the control of classical swine fever. The new directive will supersede the various directives incorporated in it; their content is fully preserved, and they are brought together with only such formal amendments as are required by the codification exercise itself. This codified text will be used as the basis for the further development of legislation in this field.
