Wheeled agricultural or forestry tractors: maximum design speed

1996/0129(COD) - 17/01/1997 - Modified legislative proposal

The modified Commission proposal relating to the maximum design speed of wheeled agricultural or forestry tractors includes the substance of two EP amendments to introduce two new recitals: - one relating to improvements and harmonization of all safety aspects such as the installation of safety belts; - the other to the effect that pollution from tractors should be the subject of Community legislation. On the other hand, the Commission rejected the amendments aimed at: - the introduction of technical controls on tractors at regular intervals (the Commission would however consider, in the framework of the appropriate procedures, what proposals should be drafted); - the addition of a new article dealing with both Community and national type-approval requirements for tractors.
