

# **Genetically modified organisms GMOs: traceability and labelling**

2001/0180(COD) - 02/07/2003 - Text adopted by Parliament, 2nd reading

The European Parliament adopted a resolution which approved some of the amendments in the report drafted by Antonios TRAKATELLIS (EPP-ED, Greece). The amendments adopted include the following:

- a central register should be set up containing sequencing information and reference material for authorised GMOs as well as relevant information concerning GMOs not authorised in the EU. The competent authorities in the Member States will have access to the register;
- a new recital states that the Commission must submit a report on the implementation of the Regulation and the effectiveness of the rules on traceability and labelling.
