

Human blood and blood components: quality and safety for the collection, testing, processing, storage and distribution

2000/0323(COD) - 30/09/2005 - Implementing legislative act

LEGISLATIVE ACT : Commission Directive 2005/62/EC implementing Directive 2002/98/EC of the European Parliament and of the Council as regards Community standards and specifications relating to a quality system for blood establishments.

CONTENT : In order to prevent the transmission of diseases by blood and blood components and to ensure an equivalent level of quality and safety, Directive 2002/98/EC calls for the establishment of specific technical requirements including Community standards and specifications with regard to a quality system for blood establishments. A quality system for blood establishments must embrace the principles of quality management, quality assurance, and continuous quality improvement, and should include personnel, premises and equipment, documentation, collection, testing and processing, storage and distribution, contract management, non-conformance and self-inspection, quality control, blood component recall, and external and internal auditing.

This Directive lays down those technical requirements, which take account of: Council Recommendation 98/463/EC on the suitability of blood and plasma donors and the screening of donated blood in the European Community; Directive 2001/83/EC on the Community code relating to medicinal products for human use; Commission Directive 2003/94/EC laying down the principles and guidelines of good manufacturing practice in respect of medicinal products for human use and investigational medicinal products for human use; Commission Directive 2004/33/EC implementing Directive 2002/98/EC as regards certain technical requirements for blood and blood components, certain recommendations of the Council of Europe, the monographs of the European Pharmacopoeia, particularly in respect of blood or blood components as a starting material for the manufacture of proprietary medicinal products, recommendations of the World Health Organisation, as well as international experience in this field.

The Directive provides that guidance on good practice must be developed by the Commission to support the quality system requirements for blood establishments taking fully into account the detailed guidelines referred to in Article 47 of Directive 2001/83/EC so as to ensure that the standards required for medicinal products are maintained.

Blood and blood components imported from third countries, including those used as starting material or raw material for the manufacture of medicinal products derived from human blood and human plasma intended for distribution in the Community, must meet equivalent Community standards and specifications relating to a quality system for blood establishments as set out in this Directive.

The Directive provides that a quality system is to be applied for any blood and blood components circulating in the Community and that Member States must ensure that for blood and blood components coming from third countries, there is a quality system in place for blood establishments in the stages preceding importation equivalent to the quality system provided under this Directive.

Finally, the Directive also determines common definitions for technical terminology in order to ensure the consistent implementation of Directive 2002/98/EC.

ENTRY INTO FORCE : 20/10/2005.

TRANSPOSITION : 31/08/2006.
