OJ L 319 12.12.1994, p. 0001

Summary

IMO Resolution A 747/18 on the application of tonnage measurement in segregated ballast oil tankers

1993/0481(SYN) - 13/06/1994

IMO Resolution A 747/18 on the application of tonnage measurement in segregated ballast oil tankers

1993/0481(SYN) - 16/11/1994 - Text adopted by Parliament, 2nd reading

The European Parliament approved the Council common position without amendment.

IMO Resolution A 747/18 on the application of tonnage measurement in segregated ballast oil tankers

1993/0481(SYN) - 21/11/1994 - Final act

The Council regulation seeks to implement International Maritime Organisation (IMO) regulation A.722/17 on the application of tonnage measurement of ballast spaces in segregated ballast oil tankers in the Community. These tankers are currently penalised, especially as regards port dues, because they have a higher gross registered tonnage, but the same capacity, as more polluting classical tankers. Content of the regulation: - only oil tankers which comply with the definition of segregated ballast in the MARPOL 73/78 convention qualify and are clearly identified as oil tankers with segregated ballast tanks; - any ship which complies with this definition must be certified as an oil tanker with segregated ballast tanks and mention must be made on its international certificate for the prevention of pollution by hydrocarbons; - the gross registered tonnage will be calculated in accordance with the 1969 international convention on the gross registered tonnage of ships, using a formula set out in the annex to the directive. The figure obtained will be entered under the heading "Remarks" on the international tonnage certificate for the ship by the competent body issuing the certificate; - the authorities which set the fees payable by oil tankers will deduct the tonnage of the segregated ballast tanks from the gross registered tonnage of oil tankers with segregated ballast tanks, as stated under "Remarks" on the ship's international tonnage certificate. Date of entry into force of the Regulation: 1 January 1996.

IMO Resolution A 747/18 on the application of tonnage measurement in segregated ballast oil tankers

1993/0481(SYN) - 19/09/1994 - Council position

The Council common position incorporates two of the three amendments adopted by the European Parliament at first reading and rejects the amendment seeking to ensure that port authorities which apply the IMO resolution are not at a competitive disadvantage. The other two amendments were accepted subject to certain changes. As regards the idea of a discount on dues payable by oil tankers with separate ballast tanks, the Council prefers to introduce lower dues for SBT and considers that the difference between the dues payable by oil tankers with and oil tankers without separate ballast tanks should be 17% rather than the 20% proposed by Parliament. Finally, the Council has introduced a period of adjustment in order to arrive at the figure of 17%. At the same time, the Council has introduced new amendments to the regulation as follows: - the regulation is addressed to port and pilot authorities, - port authorities which do not calculate dues on the basis of the gross registered tonnage must not penalize SBT, - the type I committee has been replaced by a type IIIb committee, - all references to sanctions in the event of failure to apply the regulation have been deleted, - provision has been made for an evaluation report on the payment of differentiated dues to be presented to the European Parliament and the Council by 31 December 1998.

IMO Resolution A 747/18 on the application of tonnage measurement in segregated ballast oil tankers

1993/0481(SYN) - 01/06/1994 - Economic and Social Committee: opinion, report

IMO Resolution A 747/18 on the application of tonnage measurement in segregated ballast oil tankers

1993/0481(SYN) - 03/05/1994 - Text adopted by Parliament, 1st reading/single reading

Adopting the report by Mr SABLIS (PPE, EL), the European Parliament approved this proposal for a regulation subject to the following amendments: - it considered that tonnage-based dues for separate ballast tanks not used to carry cargo on tankers was an unjustifiable surcharge; - it also considered that the port authorities prepared to apply the IMO resolution should not be at a competitive disadvantage, - it therefore called on the port and pilot authorities to exclude the gross registered tonnage of separate ballast tanks when calculating the dues payable by oil tankers (calculation carried out integrally or otherwise on the basis of the overall carrying capacity of the vessel). Instead of applying this calculation, they may adopt a system whereby these oil tankers are granted a discount on the dues payable, provided that there is a difference of at least 20% between the dues payable by these tankers and the dues payable by oil tankers without separate ballast tanks.

IMO Resolution A 747/18 on the application of tonnage measurement in segregated ballast oil tankers

1993/0481(SYN) - 08/12/1993 - Legislative proposal

The purpose of this proposal for a regulation was the implementation within the Community of resolution A.722/17 of the International Maritime Organisation (IMO) on the tonnage measurement of ballast tanks on board segregated ballast oil tankers, which were currently penalised in terms of port dues since, capacity for capacity, their registered tonnage was greater than that of conventional, 'dirtier' tankers. Under the proposal: - only oil tankers meeting the definition of MARPOL Convention 73/78 on the replacement of ballast water should be considered as segregated ballast oil tankers, and should be clearly identified as such; - any vessel meeting this definition should be certified as a segregated ballast oil tanker and this should be recorded on its international oil pollution prevention certificate; - the vessel's registered tonnage should be calculated in accordance with the rules of the 1969 International Convention on Tonnage Measurement of Ships and a formula set out in the Annex to the directive. The figure arrived at should be entered on the vessel's international tonnage certificate by the body issuing it, under the heading 'remarks'; - the body calculating the dues payable by the oil tanker should deduct from the vessel's gross registered tonnage the capacity of the segregated ballast tanks of the vessel equipped with such tanks, as indicated under the heading 'remarks' in the vessel's international tonnage certificate.

IMO Resolution A 747/18 on the application of tonnage measurement in segregated ballast oil tankers

1993/0481(SYN) - 02/06/1994 - Modified legislative proposal

The Commission's amended proposal incorporates the three amendments adopted by the European Parliament.
