<b>Final act</b>
Regulation 2026/1184 OJ OJ L 10.06.2026

## Single European railway area: use of railway infrastructure capacity

2023/0271(COD) - 19/05/2026 - Text adopted by Parliament, 2nd reading

The European Parliament adopted a legislative resolution **approving** the Council's position at first reading with a view to the adoption of a regulation of the European Parliament and of the Council on the use of railway infrastructure capacity in the single European railway area, amending Directive 2012/34/EU and repealing Regulation (EU) No 913/2010.

### **Objective**

The proposed regulation introduces new rules relating to the allocation of railway infrastructure capacity, allowing for longer-term planning of railway services, and thus aims for better use of the infrastructure and an increase in railway services, both for passengers and for goods.

The new system relies on a comprehensive consultation process to enable infrastructure managers to better understand the needs of the various applicants. Once the consultation phase is complete, capacity will be allocated. The new system also aims to: (i) enable better cross-border coordination and the implementation of improved multi-network services; and (ii) limit excessive modifications through a system of deterrent penalties.

### **Role of Member States**

Member States may provide strategic guidance to infrastructure managers, while respecting their operational autonomy. In particular, they may: (i) decide on the specific nature of a timetable model, (ii) set minimum volumes for specific types of rail transport services, and (iii) take national priorities into account in capacity allocation parameters or conflict resolution.

### **Capacity management**

The management of railway infrastructure capacity will be based on longer-term planning. Each timetable that will come into effect from December 2030 onwards and will apply to the following year will be developed and implemented in three successive phases:

**1) Planning:** Infrastructure managers will begin with strategic capacity planning and ensure that these plans are coordinated. Based on the strategic plan, the infrastructure manager will define: (i) a capacity strategy, (ii) the capacity model, and (iii) a capacity supply plan. Special procedures are designed to manage heavily used or saturated infrastructure.

**2) Allocation:** Infrastructure usage rights must be allocated among applicants using digital tools and services. Infrastructure managers must: (i) consider issues related to the capacity of service facilities; and (ii) integrate infrastructure work into planning. If, at the end of the allocation process, conflicts remain between applicants' requests and available capacity, a conflict resolution process is planned. If no agreement can be reached, a fair, transparent, and non-discriminatory method will be applied based on operational, socioeconomic, and environmental criteria.

**3) Adaptation:** Before the schedule comes into effect, modifications may be requested. To avoid excessive changes, requests must remain limited, and a penalty system is in place to discourage excessive modifications.

#### ***Traffic and crisis management***

The European Network of Infrastructure Managers (ENIM) will develop a framework to help infrastructure managers and operational stakeholders coordinate the management of traffic, disruptions and crises, using common tools, methods and procedural approaches.

#### ***Performance review***

The ENIM will monitor and compare the performance of rail infrastructure services. It will publish a European performance review report and update it annually. The Commission may establish a performance advisory panel, acting as an independent and impartial expert group tasked with making recommendations.

#### ***Governance***

The regulation assigns new responsibilities to the ENIM: to implement the three phases and to better coordinate the work of infrastructure managers regarding multi-network rail services. The ENIM will also appoint the network coordinator, subject to approval by the European Commission. The European Network of Rail Regulatory Bodies (ENRRB) will oversee regulatory matters and coordinate between national regulators.

#### ***Implementation***

The first timetable applying the new rules provided for by the regulation will be published in 2030 and will begin to apply from 14 December 2030.

## **Single European railway area: use of railway infrastructure capacity**

2023/0271(COD) - 11/07/2023 - Legislative proposal

PURPOSE: to improve the railway infrastructure capacity in the single European railway area.

PROPOSED ACT: Regulation of the European Parliament and of the Council.

ROLE OF THE EUROPEAN PARLIAMENT: the European Parliament decides in accordance with the ordinary legislative procedure and on an equal footing with the Council.

BACKGROUND: the EU has already adopted legislation on rail infrastructure capacity management and rail traffic management - Directive 2012/34/EU establishing a single European railway area and Regulation (EU) No 913/2010 on rail freight corridors. This reflects the policy goal of bringing into being a single European railway area, in which railway undertakings are able to provide transport services, including cross-border services, on an increasingly integrated and interoperable network.

EU action is necessary to **remove obstacles** in EU legislation that prevent the implementation of sector initiatives to modernise capacity management. Incentives and performance schemes could, in principle, be re-designed nationally, but would lack the scope necessary to tackle cross-border issues. More effective international coordination cannot be achieved without clear legal rights and obligations, which need to be harmonised, at least to a certain extent, across the EU. If not addressed at EU level, the lack of harmonisation/interoperability of digital tools could result in the deployment of divergent, incompatible systems in different Member States.

EU action will make it possible to put effective and efficient instruments in place to coordinate strategic infrastructure capacity planning, address potential gaps in the mandate of regulatory bodies with regard to cross-border rail traffic, and introduce harmonised rules incentivising the reduction of cancellations of and amendments to capacity requests.

This initiative will repeal the rail freight corridors Regulation and the provisions of Directive 2012/34/EU on the allocation of rail infrastructure capacity. Revised rules and procedures governing rail infrastructure capacity management and rail traffic management will be introduced in the form of this new regulation.

This legislative proposal is part of the **Greening Freight Package** of proposals covering several modes of transport. Its aim is to advance the decarbonisation of freight transport, promote intermodal transport and complete the single European railway area. In addition to this proposal, it includes:

- the revision of Council Directive 92/106/EEC (the Combined Transport Directive) to encourage the use of intermodal transport;
- the [proposed](#) revision of Council Directive 96/53/EC on weights and dimensions;
- the [proposal](#) for a regulation establishing a harmonised framework for GHG emissions from freight and passenger transport services (the CountEmissions EU initiative).

CONTENT: the Commission proposal aims to **improve the existing rail capacity allocation framework** and introduce new rules and procedures on rail infrastructure capacity management and rail traffic management for domestic and international rail services, including crisis management and performance management. It seeks to **optimise the utilisation of the rail network and the quality of capacity and operations**, thus improving the performance of rail transport services and accommodating larger amounts of traffic.

The proposal:

- describes the subject matter of the proposed Regulation, which lays down rules to **allow rail infrastructure capacity and rail traffic to be managed in a way that optimises the network's use**, thereby improving the quality of services and accommodating larger amounts of traffic;
- establishes the **general responsibilities of rail infrastructure managers** and the principles they must abide by in exercising their functions;
- sets out the **general rules for capacity management** in particular the three stages of the capacity planning and allocation process: (i) **strategic capacity planning**; (ii) **scheduling and allocation** of capacity; (iii) **adaptation and rescheduling** of capacity;
- contains obligations on infrastructure managers to jointly develop a **European framework for capacity management**. Specific provisions address the management of scarce infrastructure capacity and of capacity restrictions resulting from work on infrastructure and degraded infrastructure;
- introduces obligations concerning **traffic management, disruption management and crisis management** and requires infrastructure managers to jointly develop a **European framework for cross-border coordination** on these issues. Specific provisions ensure that in a **crisis**, Member States can apply emergency measures for the management of rail capacity and traffic;
- introduces a **performance review framework**. To improve the performance of rail infrastructure services in the EU, the **European Network of Infrastructure Managers** (ENIM) is given the task of monitoring different aspects of performance and producing annual public reports on performance. A newly created Performance Review Body will give advice and recommendations on performance-related matters;
- contains provisions on the **regulatory oversight** of capacity and traffic management, expanding the tasks and responsibilities of the European Network of Rail Regulatory Bodies (the ENRRB) with respect to EU and cross-border matters. To this end, the ENRRB will have a Board of Regulatory Bodies as a decision-making body and a Secretariat supporting the Board;
- supports the deployment of **digital tools** enabling better capacity and traffic management.

## Single European railway area: use of railway infrastructure capacity

2023/0271(COD) - 12/03/2024 - Text adopted by Parliament, 1st reading/single reading

The European Parliament adopted by 565 votes to 14, with 37 abstentions, a legislative resolution on the proposal for a regulation of the European Parliament and of the Council on the use of railway infrastructure capacity in the single European railway area, amending Directive 2012/34/EU and repealing Regulation (EU) No 913/2010.

The European Parliament's position adopted at first reading under the ordinary legislative procedure amends the proposal as follows:

### **Subject matter**

Members stipulated that this Regulation should lay down rules and procedures for the implementation of an **integrated digital European rail traffic management system**.

### **Management of limited infrastructure capacity**

Infrastructure managers should manage scarce capacity or resolve conflicts using objective, transparent and non-discriminatory procedures. Procedures should design **alternative scenarios** to address capacity conflicts between two requests that both are not consistent with the strategic capacity planning.

### **General responsibilities and principles**

In fulfilling their responsibilities, infrastructure managers should:

- make **optimum effective use of the available infrastructure capacity** with the aim of increasing the share of rail transport, both for passenger and freight services in accordance with Union's climate targets;
- enable **seamless and punctual rail traffic** across more than one network and across borders by striving to eliminate bottlenecks and operational obstacles;
- contribute to the implementation and development of the **single European railway area**, in particular through common European technical and operational rules and standards, technical equipment requirements and staff certification.

### **Definitions**

Members stated that '**force majeure**' should mean any unforeseeable, unavoidable or exceptional event or situation beyond the control of the infrastructure manager, the railway undertaking or the applicant, which cannot be overcome with reasonable foresight and diligence, cannot be solved by measures which are from a technical, financial or economic point of view reasonably possible including re-routing across borders. This event must have actually happened and needs to be objectively verifiable.

They also introduced the term '**applicant**' meaning a railway undertaking or an international grouping of railway undertakings or other persons or legal entities, such as competent authorities and shippers, freight forwarders and combined transport operators, with a public-service or commercial interest in procuring infrastructure capacity.

#### ***Capacity restrictions resulting from infrastructure work and degraded infrastructure***

Member States should prevent the degrading of rail infrastructure and should minimise the impact of possible capacity restrictions by ensuring **adequate, stable and timely long-term funding** via multiannual performance agreements that should be concluded between Member State and the infrastructure manager for the period of at least five years.

#### ***Strategic capacity management***

Member States should coordinate the timely provision of guidance to and ensure consistency between the respective strategic guidance they provide with a view to supporting the development of international passenger and freight rail services.

Member States should: (i) ensure advance allocation of financial resources for the infrastructure managers for regular maintenance of infrastructure and financial resources for infrastructure development described in the capacity strategy as referred to in the Regulation; (ii) coordinate their long-term strategic infrastructure and timetable plans, their infrastructure development based on these plans and coordinate the timelines of their implementation.

Strategic capacity planning should also take into account: (i) the **capacity needs** announced by operational stakeholders and the input from the consultation of current and potential applicants; (ii) as far as possible, the **socio-economic and environmental impact** of the use of infrastructure capacity. Strategic capacity planning should cover the Single European Railway Area.

Candidates, the European Rail Platform (ERP), rail users and their associations, and EU and Member State public authorities should be consulted during the strategic planning process.

#### ***Methods of capacity allocation***

The infrastructure manager should be allowed to use, where relevant, specific timetabling approaches. If the infrastructure manager decides to pre-plan capacity by using systematic train paths with cross-border relevance, the infrastructure manager should coordinate with neighbouring infrastructure managers and other concerned infrastructure managers concerned to find mutually agreed solutions for cross-border traffic.

#### ***Network interruptions***

In the case of a partial or total interruption of services caused by disruption of train operation due to a technical failure, incident or an accident on a cross-border line that lasts longer than 15 days, the impacted infrastructure managers should, within 30 days of the occurrence, prepare an **incident report**. The incident report should be made publicly available and shall be regularly updated until the interruption is lifted.

#### ***Performance Review Body***

Members called for, by six months from the entry into force of this Regulation, a Performance Review Body to be established as an impartial, competent and self-standing body.

#### ***European Railway Platform (ERP)***

To strengthen the role of Railway Undertakings and applicants, ERP is established as a **consultative body** to the European Network of Infrastructure Managers (ENIM). Operators of service facilities and terminals, multimodal capacity stakeholder, such as sea and inland waterway ports and owners of other rail-related service facilities, might also be part of ERP.

ENIM should consult ERP before preparing adoption of the European frameworks for Capacity Management, Traffic Management and Performance Management. Furthermore, ERP could provide ENIM with a closer view on market developments and it could also issue own initiative opinions on any proposals or decisions by ENIM and European Railway Agency (ERA).

The ERA should provide support, at the Commission's request, for the drafting of the **implementing acts and specific delegated acts** provided for in the Regulation.

Lastly, the European Network of Rail Regulatory Bodies (ENRRB), should adopt a recommendation on the European framework for the review of performance by [six months from the entry into force of this Regulation]. While setting up and implementing the European framework for the review of performance, ERA shall take into account the recommendation issued by the ENRRB.
