### Conservation of fish stocks: measures in relation to countries allowing non-sustainable fishing

**PURPOSE:** to introduce a targeted amendment to Regulation (EU) No 1026/2012 on certain measures for the purpose of the conservation of fish stocks in relation to countries allowing non-sustainable fishing.

**PROPOSED ACT:** Regulation of the European Parliament and of the Council.

**ROLE OF THE EUROPEAN PARLIAMENT:** the European Parliament decides in accordance with the ordinary legislative procedure and on an equal footing with the Council.

**BACKGROUND:** as provided in the United Nations Convention on the Law of the Sea of 10 December 1982 (UNCLOS) and in the United Nations Agreement for the Implementation of the Provisions of the United Nations Convention on the Law of the Sea of 10 December 1982 relating to the Conservation and Management of Straddling Fish Stocks and Highly Migratory Fish Stocks of 4 August 1995 (UNFSA), the management of certain shared, straddling and highly migratory fish stocks requires the cooperation of all the countries in whose waters the stock occurs and the countries whose fleets exploit that stock.

Regulation (EU) 1026/2012 of the European Parliament and of the Council on certain measures for the purpose of the conservation of fish stocks in relation to countries allowing non-sustainable fishing lays down a framework for the EU to adopt certain measures regarding the fisheries-related activities and policies of third countries which allow non-sustainable fishing in order to ensure the long-term conservation of stocks of common interest to the Union and those third countries. Such measures can include identifying a country as a country allowing non-sustainable fishing and imposing quantitative restrictions on importations of fish from the stock of common interest that have been caught under the control of that country and on importations of fishery products made of or containing such fish.

**CONTENT:** this proposal is a targeted amendment to Regulation (EU) 1026/2012 and is mostly aimed at clarifying certain elements of the conditions to **trigger the identification of a country as allowing unsustainable fishing**, for increased legal certainty. The amendment is also intended to clarify and reinforce the **process for cooperation** before and after the EU takes measures, with the ultimate goal to obtain the cessation of non-sustainable fishing practices as soon as possible.

More specifically, the proposed regulation:

- introduces a definition of 'failure to cooperate' to better define, for the purposes of Regulation (EU) No 1026/2012, the scope and meaning of the requirement to cooperate pursuant to UNCLOS and UNFSA.
- clarifies that a country may be considered to allow non-sustainable fishing if it does not implement the necessary measures, and that such measures include control measures;
- reinforces the procedures prior and subsequent to the adoption of measures in respect to countries allowing non-sustainable fishing.

## Conservation of fish stocks: measures in relation to countries allowing non-sustainable fishing

2024/0224(COD) - 15/04/2025 - Committee report tabled for plenary, 1st reading/single reading

The Committee on Fisheries adopted the report by Thomas BAJADA (S&D, MT) on the proposal for a regulation of the European Parliament and of the Council amending Regulation (EU) No 1026/2012 concerning certain measures for the conservation of fish stocks with regard to countries authorising unsustainable fishing.

As a reminder, the proposal constitutes a targeted amendment to Regulation (EU) No 1026/2012 and aims primarily to clarify, with the aim of increasing legal certainty, certain elements of the conditions for identifying a country as a country that authorises unsustainable fishing.

The committee recommended that the European Parliament adopt its position at first reading by amending the Commission's proposal as follows:

### ***Regional Fisheries Management Organizations (RFMOs)***

Members believe it is essential to strengthen the role of monitoring bodies within RFMOs. The proposed amendments aim to make RFMOs a genuine compliance tool in the EU's international fisheries governance strategy, harnessing their full potential to combat unsustainable fishing practices.

### ***Failure to cooperate***

Members clarified the concept of 'failure to cooperate': the failure of a third country to engage in good faith and have meaningful consultations with all the relevant coastal States and/or fishing parties, including within RFMOs, with a view to reaching an agreement on the adoption of necessary fishery management measures.

Examples of failure to cooperate include, but are not limited to:

- undue delays in replying to requests or engaging in consultations;
- unreasonable requests for information or actions to be taken, including unreasonable deadlines to reply or act;
- consistently maintaining their own positions over an extended period, regardless of the flexibilities and concessions offered by other parties during the consultations;

- adopting unreasonable and unjustified unilateral measures or quotas which are not in line with the measures or quotas agreed bilaterally or multilaterally;
- implementing discriminatory measures that impact the fleets of third countries, while granting a partial or full exemption from those measures for their own fleet, leading to stocks being in an unsustainable state;
- lack of transparency in the consultations with all the relevant coastal States or fishing parties, including within RFMOs.

#### ***Countries allowing unsustainable fishing***

A country may be identified as a country allowing non-sustainable fishing where:

- it fails to adopt, implement, comply with or enforce relevant fishery management measures, or those agreed bilaterally or multilaterally, including control measures ensuring the effective conservation and management of stocks of common interest or associated species, including measures adopted in the framework of an RFMO;
- it systematically fails to comply with bilateral or multilateral agreements, by failing to take effective or timely action against its nationals or flagged vessels, which were deemed to have carried out illegal, unreported and unregulated fishing or acted contrary to the fishery management measures established by such agreements, leading to stocks being in an unsustainable state.

#### ***Procedures prior to the adoption of measures in respect to countries allowing non-sustainable fishing***

The Commission should respond within **90** days of receiving a request, from a Member State or the European Parliament, to identify a country as a country allowing non-sustainable fishing and outline what action it intends to take, if any.

When the stock of common interest falls under the scope of an RFMO and the non-compliance by a third country results in that country being identified as a country allowing non-sustainable fishing, the Commission should raise the matter of a third country allowing non-compliance within the relevant body, to seek timely rectification of the non-compliance.

The Commission should give to the country concerned a maximum of 90 days to reply to the notification and a further maximum of 90 days from the date of that reply to remedy the situation.

#### ***Best available scientific advice***

Members introduced a clear definition of 'best available scientific advice', meaning publicly available scientific advice that is supported by the most up-to-date scientific data and methods and that has either been issued or reviewed by an independent scientific body that is recognised at Union or international level.

## **Conservation of fish stocks: measures in relation to countries allowing non-sustainable fishing**

2024/0224(COD) - 09/07/2025 - Text adopted by Parliament, 1st reading/single reading

The European Parliament adopted by 681 votes to 4, with 4 abstentions, a legislative resolution on the proposal for a regulation of the European Parliament and of the Council amending Regulation (EU) No 1026/2012 on certain measures for the purpose of the conservation of fish stocks in relation to countries allowing non-sustainable fishing.

As a reminder, the proposal is a targeted amendment to Regulation (EU) No 1026/2012 and aims primarily to clarify certain elements of the conditions to trigger the identification of a country as allowing unsustainable fishing, for increased legal certainty.

The European Parliament adopted its position at first reading by amending the Commission's proposal as follows:

#### ***Regional Fisheries Management Organisations (RFMOs)***

The amended text clarifies that it should be possible for a country to be considered as allowing non-sustainable fishing if it does not implement or enforce the necessary fishery management measures, and that such measures include control measures, including within the framework of RFMOs.

It is also appropriate to reinforce the procedures prior and subsequent to the adoption of measures in respect of countries allowing non-sustainable fishing, including within the framework of RFMOs.

#### ***Failure to cooperate***

Members stated that 'failure to cooperate' means the failure by countries to engage in good faith and have meaningful consultations, including within the framework of RFMOs, in which substantial effort is made with a view to reaching an agreement on the adoption of necessary fishery management measures. Examples of failure to cooperate include, but are not limited to:

- refusing to consult or to involve in consultations all the relevant coastal States and fishing States;
- unjustified unilateral breaking-off of consultations;

- undue delays, including in replying to requests or engaging in consultations;
- withholding information relevant for consultations;
- making unreasonable information requests;
- disregarding agreed procedures;
- systematically refusing to take into consideration counter-proposals or other parties' interests;
- systematically insisting upon own positions for an extended period, irrespective of flexibility offered by other parties in the consultations;
- refusing to take into account the best available scientific advice or historic fishing activities regarding the relevant stock or stocks.

### ***Countries allowing non-sustainable fishing***

A country could be considered a country allowing non-sustainable fishing when:

- it fails to adopt, implement or enforce necessary fishery management measures, including control measures, ensuring the effective conservation and management of stocks of common interest, including within the framework of an RFMO or where agreed bilaterally or multilaterally; or
- it adopts fishery management measures, such as quotas or discriminatory measures, without due regard to the rights, interests and duties of other countries and the Union, and those fishery management measures, when considered in conjunction with measures taken by other countries and the Union, lead to fishing activities which could result in the stock being in an unsustainable state.

### ***Procedures prior to the adoption of measures concerning countries authorising unsustainable fishing***

Where the Commission considers it necessary to adopt measures [concerning countries authorising unsustainable fishing](#), it shall **notify** the country concerned of its intention to identify it as a country allowing non-sustainable fishing. In such a case, **the European Parliament and the Council shall be immediately informed** and regularly updated on developments and the actions taken.

Where the stock of common interest falls under the scope of an RFMO, the Commission shall raise the matter of a country allowing non-sustainable fishing with the compliance body of that RFMO prior to the notification with a view to remedying the situation.

Measures with respect to countries allowing non-sustainable fishing shall cease to apply when the country allowing non-sustainable fishing adopts appropriate corrective measures necessary for the conservation and management of the stock of common interest.

### ***Best available scientific advice***

Members introduced a clear definition of 'best available scientific advice', meaning publicly available scientific advice that is supported by the most recent scientific data and methods and has been issued or reviewed by an independent scientific body recognised at EU or international level.
