Regulation 2026/1046 OJ OJ L 07.05.2026

Calculation of emission credits for heavy-duty vehicles for the reporting periods of the years 2025 to 2029

2025/0423(COD) - 12/03/2026 - Text adopted by Parliament, 1st reading/single reading

The European Parliament adopted by 473 votes to 81, with 9 abstentions, a legislative resolution on the proposal for a regulation of the European Parliament and of the Council amending Regulation (EU) 2019/1242 as regards the calculation of emission credits for heavy-duty vehicles for the reporting periods of the years 2025 to 2029.

The European Parliament adopted its position at first reading, **taking over** the Commission's proposal.

The proposal focuses on targeted amendments to the regulation on CO2 emissions from heavy-duty vehicles in order to offer manufacturers additional flexibility to comply with the 2030 CO2 emissions target, while leaving the level of ambition unchanged: it provides for the possibility to collect more emission credits in the years before 2030, which then can be used for compliance in the years after.

In order to facilitate compliance with the targets applicable as of 2030 and in light of the delay in the deployment of the public charging infrastructure along motorways for heavy-duty vehicles, manufacturers should be able to generate more emission credits before that year, which might also incentivise the earlier deployment of zero-emission heavy-duty vehicles.

During the reporting periods of the years 2025 to 2029, manufacturers should collect emission credits if their specific CO2 emissions are below the specific CO2 emissions target rather than below the CO2 emissions reduction trajectory.

As the deployment of zero-emission urban buses is already advanced and their use is not negatively affected by a possible lack of public charging infrastructure along motorways, this Regulation should not apply to urban buses.

Calculation of emission credits for heavy-duty vehicles for the reporting periods of the years 2025 to 2029

2025/0423(COD) - 16/12/2025 - Legislative proposal

PURPOSE: to amend Regulation (EU) 2019/1242 to provide additional flexibility for manufacturers of new heavy-duty vehicles as regards the calculation of emission credits for heavy-duty vehicles for the reporting periods of the years 2025 to 2029.

PROPOSED ACT: Regulation of the European Parliament and of the Council.

ROLE OF THE EUROPEAN PARLIAMENT: the European Parliament decides in accordance with the ordinary legislative procedure and on an equal footing with the Council.

BACKGROUND: Regulation (EU) 2019/1242 of the European Parliament and of the Council sets out the CO₂ targets for new heavy-duty vehicles, that form a key part of the Union framework to reduce by 2030 net greenhouse gas emissions by at least 55 % below 1990 levels and reach economy-wide climate-neutrality by 2050.

Regulation (EU) 2019/1242 sets progressively stricter CO₂ emission reduction targets for manufacturers. Those reduction targets provide long-term certainty and predictability for investors along the value chain, while allowing sufficient lead time for a fair transition. It is therefore essential to keep the level of the CO₂ emissions reduction targets established under Regulation (EU) 2019/1242 unchanged.

In order to facilitate compliance with the targets applicable as of 2030, in consideration of the delay in the deployment of the public charging infrastructure along motorways for heavy-duty vehicles, the manufacturers should be able to generate more emission credits before 2030, which may also incentivise earlier deployment of zero-emission heavy-duty vehicles.

CONTENT: the proposal focuses on targeted amendments to the regulation on CO₂ emissions from heavy-duty vehicles in order **to offer manufacturers additional flexibility** to comply with the 2030 CO₂ emissions target, while leaving the level of ambition unchanged: it provides for the possibility to collect more emission credits in the years before 2030, which then can be used for compliance in the years after.

This proposal does not change the substance of the rules, the implementation assessment remains the same as of the proposal which led to the adoption of Regulation (EU) 2019/1242, as amended by Regulation (EU) 2024/1610.

The proposed regulation amends Regulation (EU) 2019/1242 to specify the revised rules for determining emission credits and amends Annex I to the Regulation to introduce the formulas required for Annex I.

Taking into account that deployment of zero-emission urban buses is already advanced and their use is not negatively affected by a possible lack of development of the public charging infrastructure along motorways, this amendment should not apply to urban buses.
